Dear Sir

Could you please note that I object very strongly to Local stations having control of what Satellite Services can broadcast. As with Cable and Dish I Choose to pay for these services. In the case of XM I choose it because of the lack of Tedious drive1 in the form of advertisements on the local stations. If i want local traffic then I listen to local radio. If i want a specific major city then I check it on satellite.

It is pathetic that revenue based services can control or attempt to control the content provided by premium services. I therefore object in the strongest terms to any action against XM & other satellite stations regarding there content.

Stephen H carter
